

DENTAL INFORMATION MANAGEMENT & ACCESS SYSTEM

PROBLEM

DecisionBase, Inc. is a dentist-owned and dentist-controlled company that has been providing a suite of software products for the dental profession for over fifteen years. Its attributes the popularity of its software to a detailed understanding of dental practice operations and the collection of knowledge and experience gathered through a collaboration of experts across a wide spectrum of dental sciences.

CLIENT

In the early stages, the DecisionBase development team was successful in building the software to a certain point, but had limited resources and fewer skills with some of the newer technologies. They had difficulty keeping up with customer demand for new features and functions. They also struggled to meet benchmarks and milestones in the Software Development Life Cycle.

DENTAL INFORMATION MANAGEMENT & ACCESS SYSTEM

 **SOLUTION**

DecisionBase partnered with Guilford Group to develop its next generation of software. By listening to the customer before designing the software, the solution was built to automate “the process” of the way dentists work.

DENTAL INFORMATION MANAGEMENT & ACCESS SYSTEM

VALUE

TIME for Dentistry provides clinical record and information management and sharing for Dental Specialists.

Smart-Forms™ includes 100 procedures specific forms, all end-user modifiable.
